

ZOG 43

Vol. 6 No. 2 October 1970

NARHAMS ELECTIONS

Annual Narhams elections were held on 18 September, 1970. Here are the results:

Zog (President) Paul Connor
 Vice Zog - Bruce Blackistone (Best to be put in charge of vice)
 Secretary - Bill Cleary ? (!)
 Treasurer and Chief Embezzeler -
 Dave Lewis
 Senior Advisor - Jim Barrowman (who else?)

Committees will be listed next issue.

MARS - 5

MARS-5, the SSB regional will be held at Aberdeen Proving Grounds, Aberdeen, Maryland on 23-24-25 October 1970. The events are:

- Sparrow Rocket Glider
- Class 2 Streamer Duration
- Robin Eggloft
- Class 2 Parachute Duration
- Open Spot Landing
- Condor Boost Glide
- Class 1 Drag Efficiency

Cost is 40¢ per event, \$5.00 per night, \$2.75 for dinner. Write Howard Galloway at:

428 Ben Oaks Drive West
 Severna Park, Maryland 21146

or contact Jim Barrowman

Tri-Sec 2 started on 11 September, when the contestants started arriving at the motel near Newcastle, Delaware. At about 8:00 PM a meeting was held in the courtyard in order to explain procedures and hand out flight cards. The contest coordinator, Scott Brown, then explained that for tracking someone would stand at each scope and write down the elevation and azimuth in a notebook, and reduction would be done at the motel, thus not using the phones. After numerous threats of KILL! MAIM! DESTROY!, we talked Scott into using the normal tracking procedures explaining that misaligned scopes or a missed rocket would guarantee no tracks closed.

Saturday morning brought excellent tracking weather as it was clear and hot. The field was right across the road from the motel, so Dave Lewis and the Zog Ed decided to walk, and that was the only

time we did so! (You were right Bob, it was a stinking desert.) Tracking was over 80% in the first event, Class O Altitude, with a few good flights being recorded, the best being the Zog Ed 200 meters. Open payload was the only other event on Saturday, with altitudes ranging from 200 to over 600 meters. The best flight was the Kennedy-Gibbs team's 642 meters with a D-B-D 3 Stager. Even though the models went off slowly, we were still finished for the day during daylight.

The Scale judging was done that night and involved much argumentation, which kept the judges up until 3:00 am.

On Sunday the weather was excellent again, as we flew Eagle B/G, Class IFD, and Scale. In Class I FD there were some excellent times due to the incredible thermals emitted by the PA system, including one rocket that went only about 20 meters up over the launch area, but got a 30 second flight while (what else)? Uncle Bob was talking on the PA as usual. There were many other excellent times recorded. Eagle B/G brought out everything from Maxi-Mantas (3 - count 'em - 3 of which none worked (what happened, Howard?)) to John Tollocks small styrofoam Flop wing. There were also a number of successful Thunderbirds. Scale was high-

FORMER ZOG ED AT M.I.T.

Andy Elliott, former ZOG Editor, is now attending M. I. T. and is living at:

400 Memorial Drive

and will probably be able to pass mail to Bob Singer at Harvard, Guppy and Bob Parks at M.I.T. and other such people until we know their addresses.

lighted by 2 beautiful flights by Saturn Fives and 2 unstable Perishings. Tag Powell demonstrated his Hen Grenade egg lofter (complete without wadding) and Falcon, while Howard Kuhn showed off his large Spotlander and Mini Manta.

After the awards ceremony, we packed up and left, just glad to get out of the heat. (Now what to build for Condor at MARS-5?)

COA HONEST JOHN

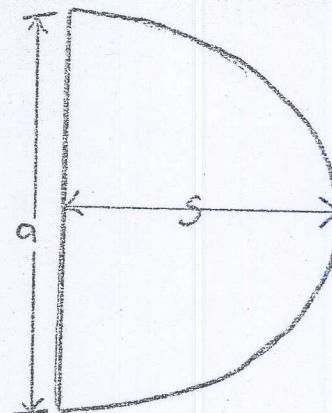

THE Cox Honest John used for this review was purchased at the Kresges at Wheaton Plaza for the ridiculously high price of \$4.00. It came in a multiclored box with a cellophane covering, so you could see the rocket inside. The box explains (crudely) how the rocket works, and shows the various parts of a rocket flight. One of these photos showed a hand-held tracking scope that looked more like a cartoon show laser gun. When the box is opened, one finds instructions, the parachute, chute wadding, shock cord, engine clips and a NAR application in the bottom part of it. The instructions are very poor, but do explain how to tie the shock cord between the nose cone and body and how to attach the pre-assembled parachute. The engine is held in place by a plastic clip which either falls out or is melted. (If this happens, the engine falls out.) That's all it takes, because the rocket comes completely assembled, with molded in launch lugs and nose cone placement notch to insure lining them up. The entire rocket is made of rejection molded plastic of red and white. The ridges and ribs used to join the fuselage parts make it next to impossible for the chute to eject, thus causing "indestructable" sample to destroy itself.

The nose cone be opened and Cox suggests putting insects in here to conduct useful research. Flight Characteristics are not too good, although stable, it is heavy and doesn't go very high. When the chute doesn't eject, the impact on someone

or something could be disastrous. Although this sounds as if I am just cutting down the rocket in this review, I am quite serious. However, it does have a good point -- you can get it from the box to the pad in less than a minute

Elliptical FIN Equations For Barrow-Man CP

The Following Equations are to be used to replace the normal Fin equations when using regular elliptical fins

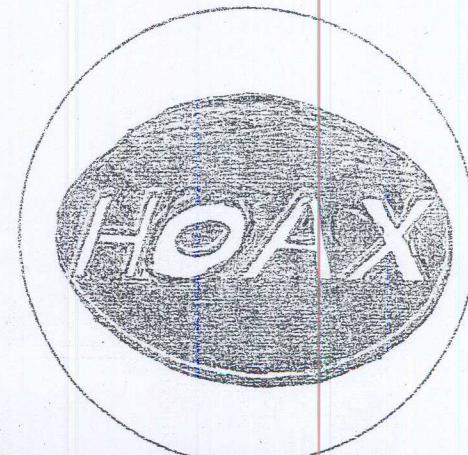

n = Number of Fins

d = diameter at base of Nose cone

$$(C_{N_A})_F = \frac{4n \left(\frac{s}{d}\right)^2}{1 + \sqrt{1 + 1.623 \left(\frac{s}{a}\right)^2}}$$

$$\bar{X}_F = X_F + 0.2884$$

BITS AND PIECES

Did you ever notice that the initials for Rocket Glider (R/G) correspond to Rube Goldberg? (You have to have some kind of Gadgetry on those things.)

Bob Singer pranged another plane with his Heathkit Radio System.

NARHAMS does have a library, but someone will have to get it from Carl Kratzer for us to use it.

It is a proven scientific fact that Bumble Bees cannot fly.

The Royal Order of Buzzards eat Carrion.

MPC is now producing fly out of the box Rockets (?).

What will Guppy call himself when he gets older? Frog, maybe?

ZOG 43 is an official publication of the NARHAMS section of the NAR
